

ABSTRACT

[00035] An embossing system comprising a base having a plurality of posts positioned on the outer portion thereof. A lower template includes a plurality of shapes formed therein and a plurality of regions on the outer portion thereof for alignment with the posts. A textured plate is positioned between the base and lower template, and an upper template includes a plurality of regions on the outer portion thereof for alignment with the posts and the regions of the lower template. A plurality of shapes are formed on the upper template. The shapes on the upper template align with the shapes of the lower template when the posts and the regions of the upper template and lower template are in alignment.
